## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dudovicz et al. (WO 99/06182), in view of Birang (EP 0 738 561 A1).

In regard to claim 1, Dudovicz et al. discloses an endless belt that may have holes that extend through the belt (from top to bottom), or grooves that extend in the running direction of the belt (from side to side) (Dudovicz, as supplied by Applicant's IDS, page 8, lines 1-7), and makes no mention of any "window" in the belt. This reads on Applicant's "at least one aperture through the belt so that the aperture is substantially free of a window".

Dudovicz is silent about the aperture positioned to allow monitoring of the workpiece through it.

Birang discloses an apparatus wherein a hole (30) that is "positioned such that it has a view of the wafer" (Birang, col. 9, lines 32-35), which reads on Applicant's "positioned to allow monitoring of the workpiece".

It is the Examiner's position that it would have been obvious to one skilled in the art at the time of the invention to modify Dudovicz by utilizing the aperture(s) to monitor the wafer, because wafer monitoring is an important part of the semiconductor manufacturing process, and may help eliminate costly unnecessary steps afterwards.

Art Unit: 1765

In regard to claims 2-7, these claims describe the number, location and configuration of the apertures in the belt.

Dudovicz is silent about the specific location, number and configuration of his apertures, although it is clear that his apertures have, indeed, a certain configuration, a specific location and are present in a specific amount.

It is the Examiner's position that variations such as shape, number and location of a piece would have been obvious to one of ordinary skill in the art at the time of the invention.

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
